HUNTSVILLE, Ala. & SAN DIEGO - (BUSINESS WIRE) - May 2, 2006 -

WebSense-Enabled NetVanta Routers Offer Proactive Security against Web-based Threats such as Spyware, Crimeware, and Phishing

ADTRAN(R), Inc. (NASDAQ:ADTN), a leading supplier of access routers, and Websense, Inc. (NASDAQ:WBSN), a global leader in web security and web filtering productivity software, today announced the integration of Websense(R) Web Security Suite(TM) with ADTRAN NetVanta(R) 3305, 4305, and 5305 routers. This new capability, provided by ADTRAN Operating System (AOS) 12.1, enables ADTRAN NetVanta routers to deliver a higher level of internet security protecting organizations from today's most advanced internet threats.

The Websense Web Security Suite is an award-winning internet filtering and web security solution that protects users from existing and emerging Web-based threats including spyware, crimeware, phishing and pharming attacks. Unlike other solutions, Websense Web Security Suite also blocks spyware and keylogger backchannel communications from ever reaching host servers. The Websense Web Security Suite also provides real-time internet security database updates for immediate protection from new security threats as they emerge.

"The ability to utilize the Websense Web Security Suite with our NetVanta routers provides our customers with an added level of internet filtering and web security. This is especially important in today's environment when new threats emerge almost daily," said Tim Saunders, vice president of product management, ADTRAN Enterprise Networks Division. "We chose to partner with Websense because they are the leader in web security and content filtering. Integration with their security products complements and enhances the features offered in our NetVanta platforms."

Using a NetVanta router in combination with Websense Web Security Suite allows organizations to manage employee internet access and enforce internet usage policies, including management of web site and protocol categories such as spyware, peer-to-peer networks, instant messaging, and streaming media. The result is increased web security for an organization and improved employee productivity.

"We are pleased to team with ADTRAN, to enable Websense integration with its NetVanta routers. Websense and ADTRAN see this as an opportunity to bring together two great channels that will provide small and mid-size corporate customers, as well as remote and branch offices, with a compelling Web security and routing solution," said Steve Kelley, director of strategic alliances for Websense, Inc. "ADTRAN and Websense offer a solid combination in terms of security, functionality, reliability, and price, making these solutions a perfect fit for the small and medium enterprise."

ADTRAN is a member of the Websense Web Security Ecosystem(TM) -- a comprehensive framework of technology integrations that provides enhanced security and ease of deployment of Websense web security solutions in enterprise environments. For more information on protecting your organization from a wide range of threats including spyware, virus outbreaks, and internal hacking exploits, please visit [www.adtran.com](http://www.adtran.com) or [www.websense.com](http://www.websense.com).
